Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Response to Election

Applicant provisionally elected the species V without traverse. Applicant also designated that the claims 14 and 17 read on species V. Examiner agrees with this statement. Therefore, it is concluded that the claims 1-13, 15 and 16 are considered non-elective claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2817

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 14 is rejected under 35 U.S.C. 102(b) as being anticipated by Mitzlaff (Fig.

1).

Mitzlaff (Fig. 1) discloses an amplifier circuit comprising a high frequency amplifying unit (105, 107) having a plurality of the amplifying elements (105, 107) for amplifying the input high frequency signal (RF INPUT), a measuring circuit (109) which measures the amplitude of input high frequency signal (RF INPUT), and a plurality of bias control circuits (111, 113) wherein each bias control circuit controls biase applied to the respective amplifying element (105, 107).

Claim 14 is rejected under 35 U.S.C. 102(e) as being anticipated by Hans (Fig.

1).

Hans (Fig. 1) discloses an amplifier circuit comprising a high frequency amplifying unit (Q1, Q2) having a plurality of the amplifying elements (Q1, Q2) for amplifying the input high frequency signal (RF In), a measuring circuit (101) which measures the amplitude of input high frequency signal (RF In), and a plurality of bias control circuits (Bias1, Bias2) wherein each bias control circuit controls biase applied to the respective amplifying element (Q1 or Q2).

Allowable Subject Matter

Claim 17 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Patent number (6,445,247) is the amplifier circuit with the measuring circuit and bias control circuit.
